

# 3 Keys to Quick-Serve Drive-Through Design

Quick-serve design is complex. A multi-site growth program that includes drive-throughs can be a challenge for even the most seasoned project manager.

Including these three steps in your process can save you from some unpleasant surprises.

## 1. DO YOUR DUE DILIGENCE.

Doing thorough due diligence can save time and money. Understanding jurisdictional requirements, site constraints, and realistic time frames will help you determine the viability of a location.

## 2. MAKE THE MOST OF THE SITE SPACE.

Space, organization, and flow are all important factors that go into a site plan with a drive-through. You are creating a new traffic pattern and it has to flow and work with the surrounding environment.

## 3. CONFIGURE THE SITE TO MEET YOUR GOALS.

Your goals and location, with any potential limitations, need to align. Determine what type of drive-through or drive-up system works best with your existing lot configuration and goals.

Check out the full article for the complete list of items for each step in the process.
